Innovation.

Its catalyst is passion—a combination of imagination and persistence that inspires certain people to look forward and go beyond what is.

It is the process of looking at the world through a different lens to find solutions to big problems.

It leads to new products and novel approaches to doing business.

Innovation is one of the most powerful societal and economic engines we have—and it needs a special type of fuel.
Although a relatively new college, SAT distinguishes itself with students and alumni who are winning numerous competitions, securing challenging professional positions and responsibilities, and launching venture-supported entrepreneurial startups.

Food Safety and Technology

The Institute for Food Safety and Health (IFSH) at Illinois Institute of Technology (IIT) is a world-class food science research institute that produces knowledge-based outcomes in the areas of food safety, food defense, and nutrition for stakeholders in government, industry, and academia. Students collaborate with IFSH researchers working on innovation in the food industry through the assessment and validation of new and novel food safety and preservation technologies, processing and packaging systems, microbiological and chemical methods, health-promoting food components, and risk management strategies.
